

Local communities, in partnership with government and industry can, through a comprehensive approach, minimize the effects from chemical incidents with a thorough planning process. The Local Emergency Planning Committee (LEPC) is vital in safeguarding public health and the environment in the community, providing its citizens and its leaders, with knowledge and access to information on hazardous and toxic chemicals, and encouraging applicable entities to develop working relationships to improve emergency response to chemical incidents. The target audience for all of the core training modules are current and prospective LEPC members, personnel from facilities with hazardous materials, and any citizen with an interest in Community Awareness and Emergency Preparedness.
